### 机柜安装说明

#### 注意事项

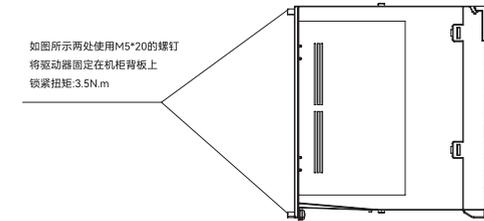

- 安装伺服驱动器时, 不可封住其吸排气孔, 也不可将其倾倒放置, 否则会造成故障。
- 为了使散热风扇能够有比较低的风阻, 以有效排出热量, 安装一台或多台驱动器时, 请依循安装间隔距离建议值。
- 请避免上下排列使用, 因下排驱动器在运转时所产生的热气上升, 容易造成上排驱动器不必要的温度增加。

注 1) 图中驱动器安装间隔距离 50mm 是按照在最高 55°C 的条件下, 无外界通风的情况。具体取决于客户的散热条, 比如柜体温度, 通风条件等, 如能保证驱动器的使用环境温度低于 55°C, 间隔距离可以低于 50mm。

#### CAUTION

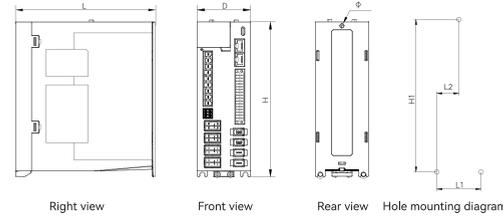

- When using an external regenerative resistor at the normal rated load rate, be sure to reduce the rated value before using the resistor when the temperature of the resistor is expected to reach 200° C to 300° C. Please consult the manufacturer for the load characteristics of the resistor.
- To ensure safety, it is recommended to use an external regenerative resistor with a temperature-controlled switch.

#### Cabinet installation instructions

##### Attention

- When installing a servo drive, do not seal its air holes or place it upside down, otherwise, it will cause malfunction.
- When installing one or more drives, follow the recommended installation spacing distance to enable the cooling fan to have relatively low air resistance for effective heat exhaustion.
- Avoid mounting the drives in the upper and lower rows. Because the heat generated by the drives in the lower row during operation will rise, causing the drives in the upper row to warm up unnecessarily.

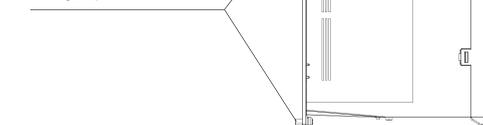

Note 1) The installation clearance of the drive in the diagram is 50mm, and the installation conditions are up to 55° C without external ventilation. More specific intervals depend on the cooling conditions such as cabinet temperature and ventilation. If the ambient temperature of the drive can be guaranteed to be lower than 55° C, the clearance can be lower than 50mm.

#### Cabinet installation instructions

##### Attention

As shown in the figure, use M5\*20 screws on both sides to secure the drive to the back plate of the cabinet. Locking torque: 3.5N.m
